Set limits on MegaServices

If you work with MegaServices module is possible that you wondered if there any way to set different prices for customers who make reservations for longer stays, for customers that exceed certain amount ... well, the easiest way set these "savings" is using **limits**.

1. Types of limits

There are different types of limits depending on the configuration that each user needs and that each product needs. You can set limits for days, minutes, quantity ... with some variables to suit all options.

- **Limit for days:** This limit is used to apply a surcharge or discount the cost of the product **from X** days. For example, the daily fixed cost of a hotel room is 60 €, but if book 7 days, the price is 50 €. You can also apply negative, ie, if book less than 7 days discount or surcharge applies.
- **Limit for same days:** This limit is active only for the day X. That is, if you indicate that the limit is 7 days, the discount only apply if the customer selects 7 days, but not if he select more than 7 or less than 7 days.
- **Limit for minute.** This limit is used when working for hours. For example, in a parking lot, the first hour costs € 0.03 a minute, from 60 minute, minute cost is 0.015 €.
- **Quantity limit:** In this case the limit applies for the number of services, not by the number of days or the contracted time. That is, if a customer buys a ticket will cost 35 €, but if buy five or more, the cost per ticket is 25 €.
- **Equal amount limit:** This limit is similar to above and the same applies in the case of day. Continuing the above example, if the customer booking 5 entries would apply the change in the cost, but only if book 5, neither more nor less.

- **Total amounts listed:** This limit is used in the groups that are listed such amount when the total meets the limit. For example, if we want when a customer buys adult ticket cost is 20 € but if buy 5 or more only costing 15 €, the number of adults a type field list of quantity.

2. Set a limit days

a) Limit days

in this case we will see how set the price of a room that costs 60 €, but if the customer booking more than one week, then the cost is 50 € and if book 15 days or more, then it will cost 30 €.

To do so access the tab **attributes** and configure the initial daily rate, establishing the dates and days in which will be active the limit, as in the following image:

The screenshot shows the 'Filter Rules' configuration page. The sidebar on the left contains navigation links: Home, Products, New Product, Configuration, Attributes, Times, Days, Ranges, Groups, Rules, Design, Calendar, Listing, Availability, Invitations, and Help. The main content area is titled 'Filter Rules' and has tabs for ALL, PRICES, SERVICES, DATES, and SEATS. The configuration is set for 'Actividades de temporada' with 'Day Price' type. The 'Value' is set to 60.000000. The 'Start Date' is 2017-09-22 and the 'End Date' is 2027-09-22. All days of the week are selected. The 'Limit Apply Value' is 0.000000 and the unit is 'Days'. There are 'Save' and 'New' buttons at the bottom.

As you can see, in this case, is not necessary add anything boundaries, because this will be the initial price. Of course, if the price varies depending on an attribute, you can select and set the same way.

*** IMPORTANT:** Remember that MegaServices must indicate the price of the product without VAT, because after the module itself will add the cost of the fees indicated on the product itself in PrestaShop.

Now let's proceed to the first boundary. In this case we will indicate that seven days since the cost is 50 €, ie 10 € less than the starting price. Therefore make the same configuration but in value, indicate the discount, ie, which must be subtracted the initial price to achieve the desired cost, in this case -10. addition the limits, indicate that is for 7 days.

The screenshot shows the 'Filter Rules' configuration page. The sidebar on the left contains a navigation menu with 'Home' highlighted in red and 'Help' in green. The main content area is titled 'Filter Rules' and has tabs for 'ALL', 'PRICES', 'SERVICES', 'DATES', and 'SEATS'. The configuration fields are as follows:

- Group:** Actividades de temporada
- Attribute:** ---
- Type:** Day Price
- Start Date:** 2017-09-22
- End Date:** 2027-09-22
- Days:** Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday (all checked)
- Value:** -10.000000
- Limit Apply Value:** 7.000000 Days

Buttons at the bottom include 'Save', 'New', 'Delete Selected Attributes', and 'Delete All Attributes'.

This will be displayed in the front office depending on the number of days selected by the customer:

<table border="1"> <tr><td>Date</td><td>09/26/2017</td></tr> <tr><td>Days</td><td>1</td></tr> <tr><td>Total Price</td><td>60,00 €</td></tr> <tr><td colspan="2" style="text-align: center;">Add to Cart</td></tr> </table>	Date	09/26/2017	Days	1	Total Price	60,00 €	Add to Cart		<table border="1"> <tr><td>Date Start</td><td>09/26/2017</td></tr> <tr><td>Date End</td><td>10/03/2017</td></tr> <tr><td>Days</td><td>7</td></tr> <tr><td>Total Price</td><td>350,00 €</td></tr> <tr><td colspan="2" style="text-align: center;">Add to Cart</td></tr> </table>	Date Start	09/26/2017	Date End	10/03/2017	Days	7	Total Price	350,00 €	Add to Cart		<table border="1"> <tr><td>Date Start</td><td>09/26/2017</td></tr> <tr><td>Date End</td><td>10/02/2017</td></tr> <tr><td>Days</td><td>6</td></tr> <tr><td>Total Price</td><td>360,00 €</td></tr> <tr><td colspan="2" style="text-align: center;">Add to Cart</td></tr> </table>	Date Start	09/26/2017	Date End	10/02/2017	Days	6	Total Price	360,00 €	Add to Cart	
Date	09/26/2017																													
Days	1																													
Total Price	60,00 €																													
Add to Cart																														
Date Start	09/26/2017																													
Date End	10/03/2017																													
Days	7																													
Total Price	350,00 €																													
Add to Cart																														
Date Start	09/26/2017																													
Date End	10/02/2017																													
Days	6																													
Total Price	360,00 €																													
Add to Cart																														
60 x 1 = 60 €	50 x 7 = 350 €	60 x 6 = 360 €																												

As you can see, if the customer selects 1 day price per day is 60 €. If select 6 days, the price remains 60 € but if choose 7 then the daily price and is 50 €.

Now let's repeat this setting so that the cost of the room, from 15 days, is 30 €. For them create a new rule indicating limit value 15 days - 20 €, then you must bear in mind that the first rule is already being fulfilled. Therefore the daily price in this case would be $10/20/60 = 30$ €.

Now therefore, if I choose 14 days or less, the price per day is 50 €, but if I choose 15 or more daily price is 30 €.

<table border="1"> <tr> <td>Date Start</td> <td>09/26/2017</td> </tr> <tr> <td>Date End</td> <td>10/10/2017</td> </tr> <tr> <td>Days</td> <td>14</td> </tr> <tr> <td>Total Price</td> <td>700,00 €</td> </tr> <tr> <td colspan="2" style="text-align: center;"> <input type="button" value="Add to Cart"/> </td> </tr> </table>	Date Start	09/26/2017	Date End	10/10/2017	Days	14	Total Price	700,00 €	<input type="button" value="Add to Cart"/>		<table border="1"> <tr> <td>Date Start</td> <td>09/26/2017</td> </tr> <tr> <td>Date End</td> <td>10/11/2017</td> </tr> <tr> <td>Days</td> <td>15</td> </tr> <tr> <td>Total Price</td> <td>450,00 €</td> </tr> <tr> <td colspan="2" style="text-align: center;"> <input type="button" value="Add to Cart"/> </td> </tr> </table>	Date Start	09/26/2017	Date End	10/11/2017	Days	15	Total Price	450,00 €	<input type="button" value="Add to Cart"/>		<table border="1"> <tr> <td>Date Start</td> <td>09/26/2017</td> </tr> <tr> <td>Date End</td> <td>10/12/2017</td> </tr> <tr> <td>Days</td> <td>16</td> </tr> <tr> <td>Total Price</td> <td>480,00 €</td> </tr> <tr> <td colspan="2" style="text-align: center;"> <input type="button" value="Add to Cart"/> </td> </tr> </table>	Date Start	09/26/2017	Date End	10/12/2017	Days	16	Total Price	480,00 €	<input type="button" value="Add to Cart"/>	
Date Start	09/26/2017																															
Date End	10/10/2017																															
Days	14																															
Total Price	700,00 €																															
<input type="button" value="Add to Cart"/>																																
Date Start	09/26/2017																															
Date End	10/11/2017																															
Days	15																															
Total Price	450,00 €																															
<input type="button" value="Add to Cart"/>																																
Date Start	09/26/2017																															
Date End	10/12/2017																															
Days	16																															
Total Price	480,00 €																															
<input type="button" value="Add to Cart"/>																																
50 x 14 = 700€	30 x 15 = 450 €	30 x 16 = 480 €																														

And so you should Irl setting consecutively, depending the discount days you want use.

This type of limits also allows you apply another price **for fewer** days,ie, can indicate for example that if the customer booking less than 3 days, the daily price rises 5 €.

To do this, you must make the same configuration as in the previous steps, but should put the limit in negative in this case - 3. As the value in this case is an increase in the price must be positive.

Group: Actividades de temporada

Attribute: ---

Type: Day Price

? We apply a price per day for selecting certain attributes, the value field will always be multiplied by the days that the customer select

Start Date: 2017-09-26

End Date: 2027-09-26

Days:
 Monday
 Tuesday
 Wednesday
 Thursday
 Friday
 Saturday
 Sunday

Value: 5.000000

Limit Apply Value: -3.000000 Days

Now, when the customer selects 1, 2 or 3 days the daily price is 65 €, however, selecting 4 or more, the price will be € 60 per day:

<div style="border: 1px solid gray; padding: 10px; width: 80%; margin: auto;"> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr><td>Date</td><td>09/26/2017</td></tr> <tr><td>Days</td><td>1</td></tr> <tr><td>Total Price</td><td>65,00 €</td></tr> </table> <p style="text-align: center; margin-top: 10px;">Add to Cart</p> </div> <p style="text-align: center; font-weight: bold; margin-top: 10px;">65 € / day</p>	Date	09/26/2017	Days	1	Total Price	65,00 €	<div style="border: 1px solid gray; padding: 10px; width: 80%; margin: auto;"> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr><td>Date Start</td><td>09/26/2017</td></tr> <tr><td>Date End</td><td>09/30/2017</td></tr> <tr><td>Days</td><td>4</td></tr> <tr><td>Total Price</td><td>240,00 €</td></tr> </table> <p style="text-align: center; margin-top: 10px;">Add to Cart</p> </div> <p style="text-align: center; font-weight: bold; margin-top: 10px;">60 x 4 = 240 €</p>	Date Start	09/26/2017	Date End	09/30/2017	Days	4	Total Price	240,00 €
Date	09/26/2017														
Days	1														
Total Price	65,00 €														
Date Start	09/26/2017														
Date End	09/30/2017														
Days	4														
Total Price	240,00 €														

You can combine this option with different attributes, selected such that instead of being overall daily price applies only to a certain combination, for example, a double room. This way you can set different prices and limits depending on the features chosen the customer.

b) Equal day limit

How can we set the price change only for a given day? With a equal days limit.

In this case, we will indicate that if the customer reservation is 5 days, the daily price is 50 €. So we must set a similar rate to the previous rule, but indicating that the limit is equal days tipe.

You indicate in value - 10 €, daily price for the set is subtracted the € 60 per day depending on the previous setting.

Days	6																									
Total Price	360,00 €																									
60 x 4 = 240 €	50 x 5 = 250€	= 60 x 60€ 360																								

3.- Set limits per minute

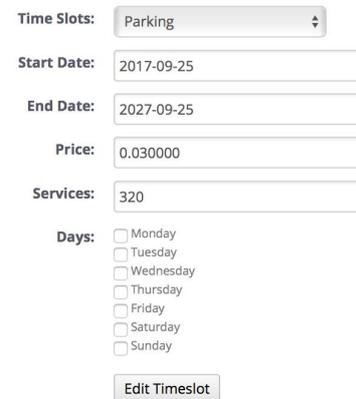

Depending the type of service bandages, it may be necessary modify the cost per minutes or hours and not days. To do this you must be aware that the product must be configured as such.

The screenshot shows a configuration form titled 'Template'. It includes a dropdown menu for 'Type' set to 'Range Times', a text input for 'Name' with the value 'Parking', two time input fields for 'Time Start' (08:00:00) and 'Time End' (20:00:00), and a text input for 'Range Time' with the value '1'. A 'Save' button is located at the bottom right of the form.

First you need to access the Times tab on the main menu and create the necessary time range.

In this case we have created a range of hours from 8 am to 8 pm minute, with parking name.

The screenshot shows a configuration form for 'Time Slots'. It includes a dropdown menu for 'Time Slots' set to 'Parking', a 'Start Date' field (2017-09-25), an 'End Date' field (2027-09-25), a 'Price' field (0.030000), and a 'Services' field (320). Below these are checkboxes for 'Days' from Monday to Sunday, all of which are currently unchecked. An 'Edit Timeslot' button is at the bottom.

Then access the product and again in the hours tab set the hours available, in this case, which we call parking, and price. You can also set the number of services available for each rank, here per minute.

Once you've created the ranges of hours in the product, then setting the limits will be similar to the days.

In this case we will set the cost of minute is € 0.03 and from 60 minute, minute cost is 0.015 €. To do it indicates that the value will be reduced from 0.010 € 60 minutes.is important to note that in this case we must select the price range of time, no diary:

Group: Actividades de temporada
 Attribute: ---
 Type: Time Range Price
 Start Date: 2017-09-25
 End Date: 2027-09-25
 Days: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday
 Value: -0.010000
 Limit Apply Value: 60.000000 Minutes
 Save New

Now, when the customer selects one minute will cost 0.03 €, but if select 60 the cost is € 0.20.

<table border="1"> <tr><td>Date</td><td>09/27/2017</td></tr> <tr><td>Timeslot</td><td>08:00-08:01</td></tr> <tr><td>Days</td><td>1</td></tr> <tr><td>Total Price</td><td>0,03 €</td></tr> </table> <p>Add to Cart</p>	Date	09/27/2017	Timeslot	08:00-08:01	Days	1	Total Price	0,03 €	<table border="1"> <tr><td>Date</td><td>09/27/2017</td></tr> <tr><td>Timeslot</td><td>08:00-09:00</td></tr> <tr><td>Days</td><td>1</td></tr> <tr><td>Total Price</td><td>1,20 €</td></tr> </table> <p>Add to Cart</p>	Date	09/27/2017	Timeslot	08:00-09:00	Days	1	Total Price	1,20 €
Date	09/27/2017																
Timeslot	08:00-08:01																
Days	1																
Total Price	0,03 €																
Date	09/27/2017																
Timeslot	08:00-09:00																
Days	1																
Total Price	1,20 €																
1min x 0.03 = 0.03 € €	60 min x 0.02 = € 1.20																

Similarly, you can indicate that if the time is less than 10 minutes, the cost is higher, for example 0,005 € more . You only have to indicate the time and cost negative into positive.

Timeslot	08:00-08:11																
Days	1																
Total Price	0,33 €																
$(0.03 + 0.05) \times 10 \text{ min} = \text{€ € } 0,80$	$0,03 \text{ €} \times 11 \text{ min} = 0.33 \text{ €}$																

4.- Set limits for quantity

a)Quantity limits

In this case are to set the limits for quantity rather time. When a customer buys a ticket will cost 35 €, but if buy five or more, the cost per ticket is 25 €.

To configure this option will have to first set the price of the product directly in the configuration or the Attributes tab if depends on a particular variable. You can also configure

without selecting attributes value to affect everything. So have to establish that the price is 35 €.

The screenshot shows a configuration interface for a product rule. On the left is a sidebar with menu items: Products, New Product, Configuration, Attributes, Times, Days, Ranges, Groups, Rules, Design, Calendar, Listing, Availability, and Invitations. The main area contains the following fields:

- Group:** Actividades de temporada
- Attribute:** ---
- Type:** Fixed Price
- Start Date:** 2017-09-26
- End Date:** 2027-09-26
- Days:** Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday (all unchecked)
- Value:** 35
- Limit Apply Value:** [] Quantity

Buttons for 'Save' and 'New' are at the bottom.

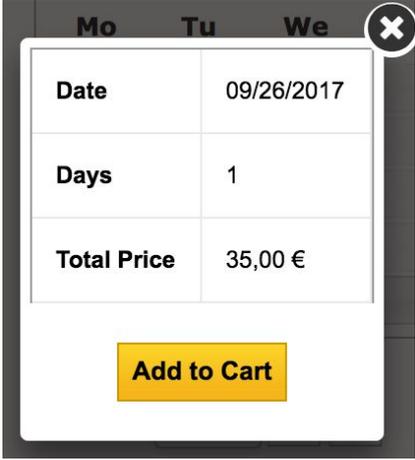

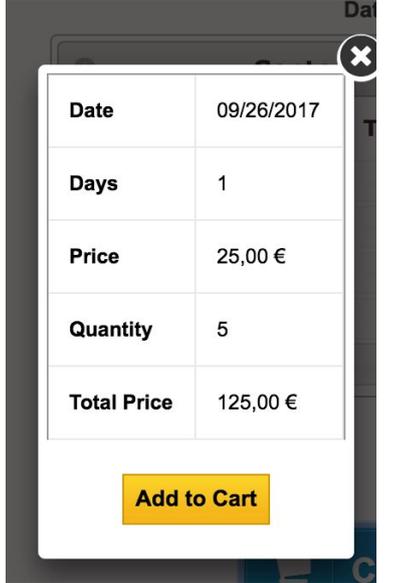

When you've set the price it's time to apply the limit amount. You will have to indicate in value -10 € (35 -10) for the cost is of € 25 per ticket and in limit, indicate that quantity is 5 and type:

This screenshot shows the same configuration interface as above, but with the following updates:

- Value:** -10
- Limit Apply Value:** 5 Quantity

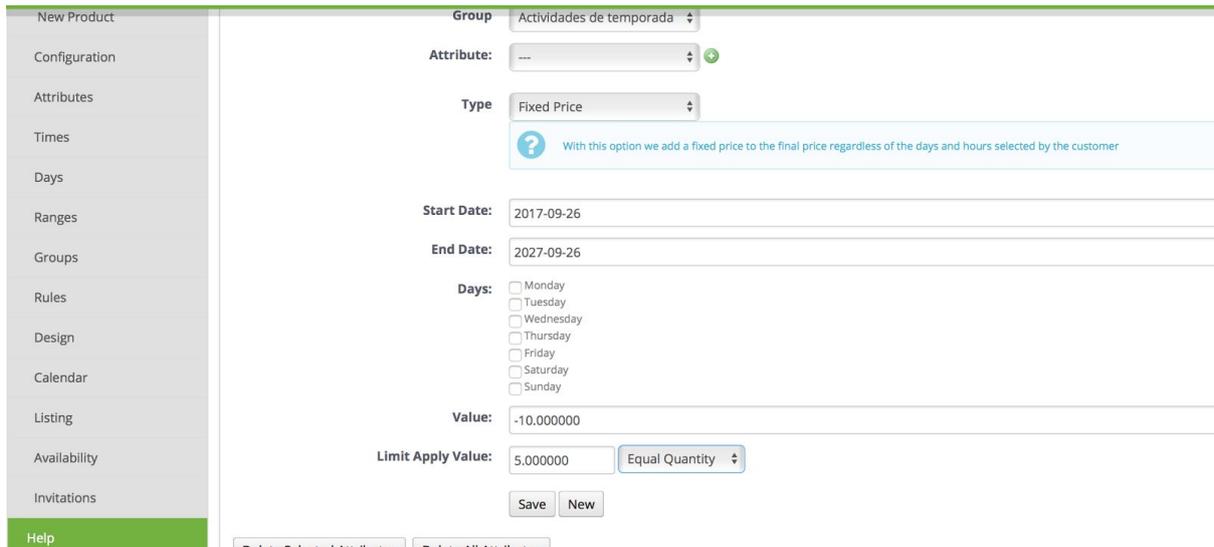

The 'Save' and 'New' buttons remain at the bottom.

In this way, the price for admission is 35, but if you buy 5 the cost per ticket is 25 €.

	
1 x 35 € = 35 €	5 x 25 € = 125 €

b) Equal amount limit

In this case we will apply the price change but only when the customer purchases 5 units. The configuration as in the previous case, but indicating that the boundary is equal to certain amount.

Group: Actividades de temporada
 Attribute: ---
 Type: Fixed Price
 Start Date: 2017-09-26
 End Date: 2027-09-26
 Days: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday
 Value: -10,000000
 Limit Apply Value: 5,000000 Equal Quantity
 Save New

Now when the customer select 5 tickets will cost 10 € less, but if the customer buy less than five or more, no.

<table border="1"> <tbody> <tr><td>Date</td><td>09/26/2017</td></tr> <tr><td>Days</td><td>1</td></tr> <tr><td>Price</td><td>35,00 €</td></tr> <tr><td>Quantity</td><td>4</td></tr> <tr><td>Total Price</td><td>140,00 €</td></tr> </tbody> </table> <p>Add to Cart</p>	Date	09/26/2017	Days	1	Price	35,00 €	Quantity	4	Total Price	140,00 €	<table border="1"> <tbody> <tr><td>Date</td><td>09/26/2017</td></tr> <tr><td>Days</td><td>1</td></tr> <tr><td>Price</td><td>25,00 €</td></tr> <tr><td>Quantity</td><td>5</td></tr> <tr><td>Total Price</td><td>125,00 €</td></tr> </tbody> </table> <p>Add to Cart</p>	Date	09/26/2017	Days	1	Price	25,00 €	Quantity	5	Total Price	125,00 €	<table border="1"> <tbody> <tr><td>Date</td><td>09/26/2017</td></tr> <tr><td>Days</td><td>1</td></tr> <tr><td>Price</td><td>35,00 €</td></tr> <tr><td>Quantity</td><td>6</td></tr> <tr><td>Total Price</td><td>210,00 €</td></tr> </tbody> </table> <p>Add to Cart</p>	Date	09/26/2017	Days	1	Price	35,00 €	Quantity	6	Total Price	210,00 €
Date	09/26/2017																															
Days	1																															
Price	35,00 €																															
Quantity	4																															
Total Price	140,00 €																															
Date	09/26/2017																															
Days	1																															
Price	25,00 €																															
Quantity	5																															
Total Price	125,00 €																															
Date	09/26/2017																															
Days	1																															
Price	35,00 €																															
Quantity	6																															
Total Price	210,00 €																															
4 x 35 € = 140	5 x 25 € = 125 €	6 x 25 € = 210 €																														

c) Total Limits list quantities

If you use type attributes list of quantity and want apply limits to that attribute can also do so using the limit type Total listed amounts.

In this case we will set that when a customer buys adult ticket cost is 20 € but if buy more than 10 only costing 15 €,

For this configuration the first step is create the necessary attributes. To do this go to **Catalog > Product Attributes** In our case we will create an attribute "number of people" values "Adults" and "Children".

When you create the attribute access the product in MegaServices and click **Groups**, where you must add the attribute group. Is very important indicate you wants how the group as **list of quantities** and the option **allow limit quantities limits**. must indicate **Yes**.

Delete Selected Attributes Delete All Attributes

Now let's proceed to set the limit. We follow the same process, but now we have to indicate the limit.

First we select the group, the attribute and price. Then we have to indicate value - 5, thus a discount of 5 € will apply when the limit is met. In limit we indicate 10 to change the price when the customer exceeds this amount and type of limit will be **total amounts listed**.
